

Fri3d badge 2026 - front plate cover sticker

Button names only. Print at 100 percent, with scaling and fit-to-page off.

100 mm check - if this does not measure 100 mm, your printer is scaling the page

1. Print this sheet on sticker paper, or on plain paper with double sided tape.
2. Cut along the red line, inner shapes included. A hobby knife on a mat beats scissors here.
3. The large opening in the middle is for the raised screen bezel, which pokes through the sticker.
4. Lay it on the front plate before peeling the backing, and check that every hole lines up.
5. Laminate it, or give it a coat of matt varnish, and it stays readable under your thumbs.
